Completed Student Portfolio Screens: Redesign Guidelines

Oct 22, 2026 · @Sivakumar D

The section embeds the full live app (about 1,900px tall, 12 views); replace it with framed screenshots that fit in one screen height (about 700px).

What isn't working

- **Too long and dense.** GPA, SAT, a 7-grade timeline, two Top 10 cards and an essay seed all show at once. The section should show the result, not the whole app.
- **Misplaced student picker.** The three name cards float top-right beside the heading, cut off at the top, so they read as decoration rather than controls.
- **Only elite examples.** Every profile is top-tier (3.98 GPA, 1550 SAT, USACO Gold, Worlds Division). Most parents will think "my kid isn't like that."
- **They read as real people.** Full names plus a specific school ("Westwood High School · Austin, TX") look like real students, a credibility and privacy risk.
- **It acts like a working app.** Clickable grade cards and "Open full screen" links pull visitors into a fake app instead of toward sign-up.

Redesign guidelines

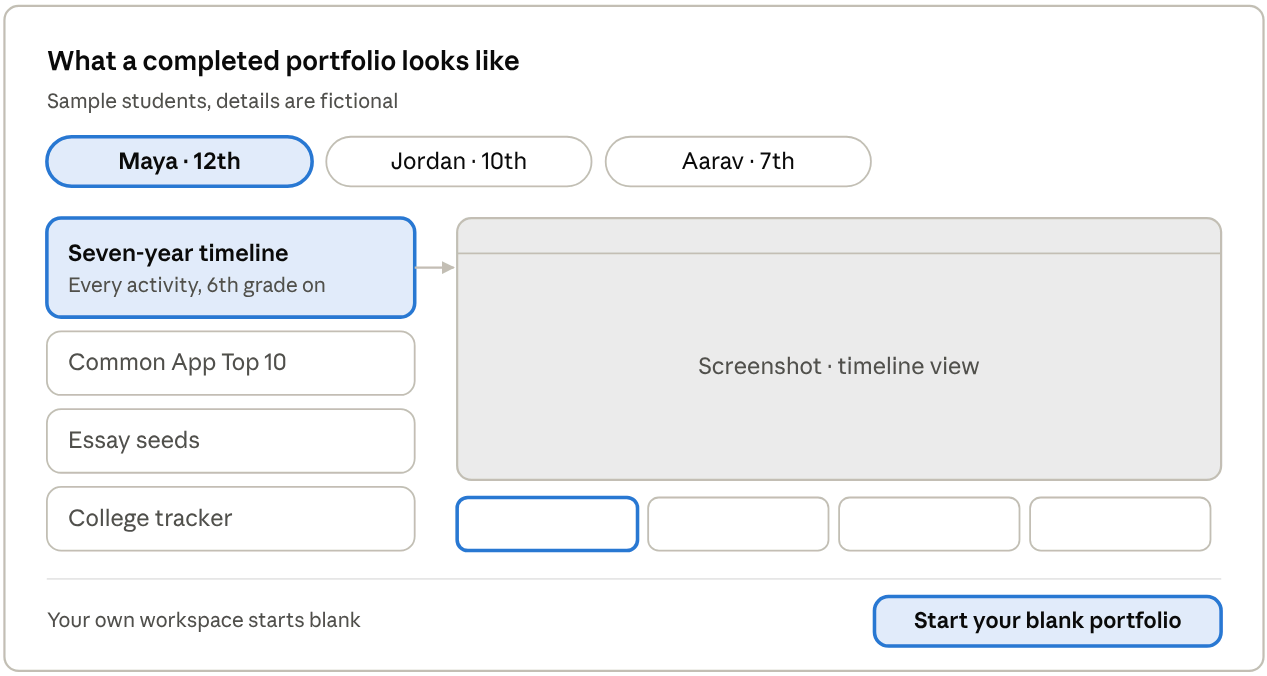

1. **Framed snapshots, not the live app.** One browser-frame image at a time, with 4 small labeled thumbnails underneath. Keep the section within one screen height (about 700px on desktop).
2. **Feature-led structure.** Short caption on the left for each screen ("Seven years of activities in one timeline"), snapshot on the right. The caption says why the screen matters; the image proves it.
3. **Simple pill switcher.** Right under the heading: Maya · 12th, Jordan · 10th, Aarav · 7th. One line per student, not a card.
4. **A range of students.** Keep one high achiever, add a typical student (about 3.4 GPA, part-time job, sibling care, one deep hobby) and a 7th grader just starting out.
5. **Label the examples.** Caption: "Sample students, details are fictional." Use generic schools ("A public high school in Texas") and first names only.

6. **One call to action.** End with a single "Start your blank portfolio" button; remove inner links like "Open full Common App Top 10 screen."
7. **Mobile.** One phone-frame screenshot, swipeable, caption above it and pill tabs that scroll sideways.
8. **Real screenshots.** Export at 2x as WebP and lazy-load: 3 students × 4 screens = 12 static images. Faster than rendering the app, and always looks right.

Behavior: clicking a caption or thumbnail swaps the screenshot; choosing a student swaps all four.

Layout

One snapshot at a time, captioned, with a single call to action

redesigned section wireframe · about 700px tall

Student pills sit under the heading; the active feature caption on the left drives the screenshot and thumbnails on the right; one button closes the section.

Other open items from the latest site check

These came from the full-site review, outside the portfolio-screens section.

Privacy and children under 13

- [ ] **Plan for students under 13.** Students start in 6th grade, around age 11. US privacy law (COPPA) has specific rules for collecting data from children under 13. The safest pattern: a parent creates the account and invites the student. Confirm with someone who knows the law; this isn't legal advice.
- [ ] **Say where AI coaching sends data.** The privacy page says prompts are "processed solely to generate feedback." Name the AI provider and state whether the data is used for training.
- [ ] **Add a privacy contact.** The /privacy page has no address for questions or deletion requests, for example privacy@pathtoadmit.com.

Layout

- [ ] **Fix the phone header.** On the dashboard at phone width, the header is about 13px wider than the screen and "Sign in" is clipped. Below about 400px, show icons only, or drop the header "Add" button since "Add activity" sits just below.
- [ ] **Drop the duplicate "Add activity" button on desktop.** The Overview page shows it in both the header and the hero.
